

cellular response to nitrogen compound

response to organonitrogen compound

cellular response to organoaitrogan compression organic substance

response to nitrogen compound negative regulation of intracellular signal transduction

aging

cellular response to oxygen—containing compound to chemical stimulus

response to insulin

circadian rhythm negative regulation of signal transduction

cellular response to insulin stimulus

insulin receptor signaling pathwapegative regulation of response to stimulus

regulation of intracellular signal transduction

cellular response to peptide

enzyme linked receptor protein signaling pathway extablishment of ommatidial planar polarity cellular response to peptide hormone stimulus

transmembrane receptor protein tyrosine kinase signaling pathway

response to peptide hormone

negative regulation of signaling

response to endogenous stimulus

cellular response to endogenous stimulus

regulation of TOR signaling
